Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 12, Application US/09557921

Patent No. 6551810

GENERAL INFORMATION:

APPLICANT: Met., Bo

TITLE OF INVENTION: DSP-10 DUAL-SPECIFICITY PHOSPHATASE
FILLE REPERENCE: 200125.416

CURRENT APPLICANT NUMBER: US/09/557,921

CURRENT FILLING DATE: 2000-04-20

NUMBER OF SEQ ID NOS: 20

SEQ ID NO 12

LEASTHARE: Mandows Version 4.0

SEQ ID NO 12

                                                                                                                                                      AAV68769-95 and AAV68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from CDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
```

```
The present invention relates to phosphatase proteins and coding sequences. The present sequence is one such phosphatase. Phosphatases are enzymes that catalyse the dephosphorylation of proteins modified by phosphorylation of serine, threenine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, synovial sarcomas, renal cell cartinoma, non-small cell lung cancer, hepatocellular carcinoma, parteric endocrine tumours, stomach cancer, glioblastoma, colorectal cancer and thyroid cancer, pathophysiological hypoxia, cardiac dysfunction and/or vascular disorders, myopathies, congenital muscle disorders, Papillon-Lefevre syndrome, Cowden disease, ectodermal dysplasia, Moebius syndrome, Biornstad syndrome, Bannayan Zonana syndrome, schizophrenia and hamartomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                   The present sequence is given in a specification providing human dual specificity phosphatase-3 (DSP-3) and a murine DSP-3 variant polypeptide. The polypeptides are useful for dephosphorylating a substrate of DSP-3, e.g. MAP-kinase. They may be used to treat or prevent diseases associated with cell proliferation, immunosuppression, metabolic diseases, or abnormal cell growth or cell cycle abnormalities. They are also useful for identifying agents that modulate their activity. The modulators are useful for treating disorders associated with DSP-3 or DSP-3 variant activity, e.g. Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle abnormalities. The modulating agents are useful for modulating collisation or altering differentiation or survival
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                      The present invention provides the protein and coding sequences of the human dual-specificity phospharase DSP-3. The DSP-3 protein is involved in cell signalling and the sequences can be used in the treatment of cancer, metabolic and autoimmune diseases, allergies, graft-versus-host disease, abnormal cell proliferation and Duchenne muscular dystrophy
                                                                                   New dual-specificity phosphatase-3 polypeptide and its variants useful for treating disorders associated with DSP-3 activity, defects in cell proliferation, differentiation or survival, e.g. Duchenne muscular dystrophy, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ONLTRHFKESI KFIHECRLRGESCLVHCLAGVSRSVTLVI AYIMTVTDFGWEDALHTVRA

The invention relates to novel genes (ABL89449-ABL90853) and proteins

(ABB89040-ABB90444) useful for preventing, treating or ameliorating

medical conditions e.g. by protein or gene therapy. The genes are
isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in

the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

covarian cancer and other cancers of the adrenal gland, bone, bone marrow,

breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune

disorders e.g. Addison's disease, allergies, autoimmune haemolytic

anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,

multiple sclerosis, rheumatoid arthritis and ulcerative collitis; (c)

cardiovascular disorders such as myocardial ischaemias; (d) wound healing

cardiovascular diseases e.g. cerebral anoxia and epilepsy; and (f)

cardiovascular diseases e.g. cerebral anoxia and epilepsy; and (f)

infections diseases such as viral, bacterial, fungal and parasitic

infections. Note: The sequence data for this patent did not form part of

the printed specification, but was obtained in electronic format directly

from WIPO at ftp.wipo.int/pub/published_pct_sequences

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing oharmacogenomics.

Disclosure; SEQ ID NO 428; 1498pp; English

This invention relates to a novel nucleic acids, and encoded polypeptides

corphysiological responses in a cell, tissue, organ or organism.

Corphysiological responses in a cell, tissue, organ or organism.

Corphysiological responses in a cell, tissue, organ or organism.

Corphysic and prognostic assays and furthermore in the treatment of diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their expression using antisense oligos, ribozymes and peptide nucleic acids.

The NOVX polypetides, polymucleotides and antibodies are useful in treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, cancer and diabetes. Purthermore, they may be used in treating or preventing diseases such as inflammation, autoimmune treating or preventing diseases such as inflammation, autoimmune treating or preventing diseases such as inflammation, autoimmune confidences, allergies, blood disorders, acquired immunodeficiency syndrome (AIDS), obesity, asthma, immunoglobulin (Ig)A mephropathy, cirrhosis, arbititis, Alzheimer's disease, infections, stroke, muscular dystrophy and epilepsy. Accordingly, these molecules have many activities including cytostatic, cardiant, antidiabetic, mephrotropic, antidiabetic, antidiabet thereof, which have properties related to the stimulation of biochemical

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or pharmacogenomics.

Disclosure; SEQ ID NO 696; 1498pp; English.

This invention relates to a novel nucleic acids, and encoded polypeptides thereof, which have properties related to the stimulation of biochemical

(TULA-) TULARIK INC

```
cc or physiological responses in a cell, tissue, organ or organism.

Specifically, it refers to the use of biologically active fragments for diagnostic and prognostic assays and furthermore in the treatment of diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their expression using antisense oligos, ribozymes and peptide nucleic acids. The NOVX polypeptides, polynucleotides and antibodies are useful in treating or preventing MOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, cancer and diabetes. Furthermore, they may be used in treating or preventing diseases such as inflammation, autoimmune disorders, allergies, blood disorders, acquired immunodeficiency syndrome (AIDS), obesity, asthma, immunoglobulin (Ig)A nephropathy, cirrhosis, arthritis, Alzheimer's disease, infections, stroke, muscular dystrophy and epilepsy. Accordingly, these molecules have many activities including cycostatic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, hemospatetic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, cardiant, antiminammatory, immunosuppressive, nootropic, antiarthritic, hepatotropic, anorectic, cardiant and anticonvulsant. In addition, they are useful in screening casasys to identify small molecules that modulate or inhibit, for example, neurogenesis, wound healing and angiogenesis. The nucleic acids are also used as in chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. This polypeptide is a homologue of a human NOVX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the protein sequence of human mitogen-activated protein kinase phosphatase X (MKPX). MKPX is amplified and overexpressed in human cancers, including colon cancer, ovarian cancer and prostate cancer. The MKPX gene, its expressed protein products and antibodies can be used diagnostically or as targets for cancer therapy or vaccine. They diagnosts, prevention and therapy, and for determining the efficacy of a therapeutic treatment regimen in a patient. A claimed method of blocking in vivo expression of the gene involves administering a vector encoding MKPX small interfering RNA (siRNA)
                                                                                        New isolated mitogen-activated protein kinase phosphatase X gene amplicon, useful for diagnosing, preventing and treating pre-cancerous lesions or cancer in a mammal, e.g. colon, prostate or ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MGNGMNKILPGLYIGNFKDARDAEQLSKNKVTHILSVHDSARPMLEGVKYLCIPAADSPS

nucleic acid. Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function; (2) a method for the diagnosis of cancer; (3) a method for inhibiting the growth of a cancer cell; (4) methods of screening for targets of a cancer call; (5) a compound (c) for the treatment of a cumour; (6) a composition for the treatment of a tumour comprising a pharmacottion in cancer cells; (5) a compound (C) for the treatment of a tumour; (6) a composition for the treatment of a tumour comprising a pharmacotulical carrier and (C); (7) methods for treating a tumour; and chosphatase of the present invention has cytostatic, immunosuppressive, antidiabetic, neuroprotective, antirheumatic, antiarthritic, antidiabetic, antiarteriosclerotic, antininjammatory, vulnerary, gynaecological and antiangiogenic activities. The cancer associated phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or diagnosing and treating cancer, e.g. phosphatases and nucleic acids encoding the proteins are useful for success, lung, ovarian, liver or colon cancer. The polypeptides and nucleic acids may also be used for treating hyperproliferative diseases, chematoid arthritis, psoriasis, atherosclerosis, multiple sclerosis, cheumatoid arthritis, psoriasis, atherosclerosis, multiple sclerosis, cheumatoid arthritis, psoriasis, atterioring pharmaceutical acids may also be used for treating the effectiveness of drugs, endometriosis or angiogenesis, determining the effectiveness of drugs, endometriosis or angiogenesis, as targets for screening pharmaceutical general inhibit the growth or metastasis of tumour cells. The present sequence represents the human cancer associated phosphatase MKPX, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ONLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

PRO polypeptide SEQ ID NO:2179.

```
polynucleotides capable of interfering with expression of a polypeptide having protein-tyrosine-phosphatase (PTP) activity. The products of the invention have cytostatic, immunomodulator, antimicrobial antimital antimital antimitation, antidiabetic and anorectic activity. The methods and compositions of the present invention are useful for treating diseases or conditions associated with aberrant expression or activity of the protein tyrosine phosphatase, such as cancer, autoimmune diseases, infection, inflammation, diabetes and obsetty. This sequence represents a siRNA directed against dual specificity phosphatase (DSP) expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated small interfering RNA (siRNA) polynucleotide useful for treating diseases with aberrant activity of the protein tyrosine phosphatase, such as cancer, autoimmune disease, infection, inflammation, diabetes and obesity.
small interfering RNA; siRNA; protein-tyrosine-phosphatase; PTP; cytostatic; immunomodulator; antimicrobial; antiliflammatory; antidiabetic; anorectic; cancer; autoimmune disease; infection; inflammation; diabetes; obesity; RNA interference; gene silencing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                          Ë
                                                                                                                                                                                                                                                                                                                                                                            Meng

The invention relates to a move insurance accession.

The invention relates to a move insurance accession of the invention has antidiabletic, dark the invention has antidiabletic, dark the invention beginning and indiabletic, dark the invention may have a use in gene therapy. The PRO polymelectide of the invention may have a use in gene therapy. The PRO polymelectide is agonist, antagonist, or antibody that specifically binds to the polymelectide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, inventie chronic arthritis, a spondyloarthropathy, systemic selerosis, an idiopathic inflammatory myopathy, Sigarn's syntemic selerosis, andidopathic inflammatory myopathy, Sigarn's syntemic selerosis, andidopathic inflammatory myopathy, Sigarn's syntemic selerosis, andidopathic demyelinating disease of the central or peripheral nervous disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, divilain Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary cirrhosis, granulomatous hepatitis, selerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, asthma, allergic rhinitis, atopic dermatitis, food disease, asthma, allergic rhinitis, atopic dermatitis, food disease, asthma, allergic rhinitis, atopic dermatitis, peripheral nervous communities, a transplanation associated disease, graft rejection or consinophilic pneumonia, idiopathic pulmonary fibrosis, graft rejection or consinophilic pneumonia, idiopathic pulmonary fibrosis, graft rejection or consinophilic pneumonia, idiopathic peneumonic sequence represents a PRO protein of the book of the longer of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. ANDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. ALDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. ALDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. ALDS) autoimmune disorders (e.g. arthritis), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. influenca). The polymucleotides of the invention can also be used in gene therapy. AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the province of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GRSCANPNVGFQRQLQEFEKHEVHQYRQWLKEEYGESPLQDAEEAKNILAAPGILKFWAF 180

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative concer, childhood cerebellar astrocytoma, or Hodgkin's lymphomal. The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system concers, pulmonary disorders, reproductive disorders, immune system disorders, pulmonary disorders, reproductive disorders and renal disorders. The polymucleotide sequences of the invention are also useful considerated polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ONLTRHFKESIKFIHECKLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
